

I beg you to prevent the repeal of net neutrality. The communication industry has lobbied, lied, tried to confuse citizens, and rigged and manipulated the comments submitted in an attempt to repeal net neutrality. There is one reason they are doing so and it is so that they can increase their profits substantially.

Repealing net neutrality would do absolutely nothing to help the citizens of this country. In fact it will only lead to substantially increased costs for consumers, increased costs for businesses who have to pay more to provide content to their customers, and lower competition for large business through increased barriers to entry for small businesses or startups who cannot pay to deliver content via "fast lanes".

Please listen to the American citizens who have time and time voiced their views and prevent the repeal of net neutrality.
